

COUNCIL QUESTIONS & ANSWERS

Meeting date: July 12th

1. **Was a detailed capital and operating cost analysis done with respect to the electric Zamboni purchase?**

A high level analysis of fuel consumption and GHG emissions related to existing equipment was conducted in selecting the Zambonis, but there was not a detailed Capital / O&M future cost comparative analysis. At the time of the decision to purchase electric, there was general direction in relation to the climate emergency and reducing GHG's as a priority, with electric vehicles considered to be a key way the City could reduce emissions when replacing and modernizing its equipment.
